Licensing Framework V1.2

How ForexBotWorks products are licensed: a free Engine, lifetime Components, clear account rules and fair services.

VERSION	STATUS	REPLACES	UPDATED
1.2	Current	Public V1.1	24 October 2026

CORE PRINCIPLE

Customers own the software they buy. No subscriptions, no rental, no forced monthly payments. A purchased Component keeps working.

01 Product structure

- The **ForexBotWorks Engine is free** and not separately licensed.
- Every trading instrument is its own paid **Component** with its own lifetime license (XAUUSD, XAGUSD, BTCUSD ...).
- **Bundles** are sold as one license that covers each Component of the bundle (Metals = XAUUSD + XAGUSD).
- Tools, dashboards and utilities need no Component license.

02 Lifetime license

- Every Component license is **lifetime**: no subscription, rental or time limit.
- Lifetime covers **all V1.x releases** of the Component, including fixes and improvements.
- A future V2 is offered to existing owners as an upgrade at 40–50 % off. V1 keeps working, with 12 months of V1 fixes after V2.

03 Editions

Edition	Trading accounts	Features
Standard	1	All features
Professional	3	All features
Business	10	All features

Every account seat has one authorized device. Upgrades (Standard → Professional → Business) cost the price difference.

04 Trading account – Live or Demo

Every seat works on **one active trading account**. The customer chooses it in **My Account** → **Licenses** and marks it as Live or Demo.

Change	Cost
To a demo account	FREE any time, unlimited
Back to the previous live account	FREE not counted as a change
New live account – 1st and 2nd in a license year	FREE
New live account – 3rd and later in a license year	80 USD per change, applied automatically after payment

The license year starts on the purchase date. The Engine reports the account type from MT5 and the Component verifies it, so a live account cannot run on a seat marked Demo.

05 Device

- One seat = one trading account + **one authorized device** (bound at the first activation).
- A device change (new PC or VPS) is handled by Support.

06 Customer-controlled configuration

- The customer sets the Telegram group, the lot size and, if needed, the broker symbol.
- Trading rules (entry filter, SL after TP1) are fixed in the Component and published in its overview.

07 Installation and detection

- Engine and Components are separate downloads (My Account → Downloads).
- A Component is unzipped into `engine\components`; the Dashboard detects it with **Refresh Components**.
- Only installed Components ask for a license; an active license is not requested again.

08 License service

- The Engine checks each license with the ForexBotWorks license service over HTTPS and re-checks every 6 hours.
- Answers are **signed**; the Engine and the Component itself verify the signature, account, device and account type.
- If the service is briefly unreachable, a signed confirmation keeps the Component working for up to 24 hours.
- A revoked license stops new signals; positions that are already open keep being managed.
- The service never receives passwords or trade data – only license key, account number, platform, account type, an anonymous device ID and versions.

09 Purchase and delivery

- WooCommerce on forexbotworks.com is the purchase point; the Engine is a free product.
- At checkout the customer enters the trading account and whether it is Live or Demo.
- The license is created automatically; key and downloads are in My Account and in the confirmation e-mail.

10 Updates

- The Dashboard shows available Engine updates (**Engine Update**) and can install them automatically when no signal is open.
- Updates are signed by ForexBotWorks; settings, Telegram login, licenses and trade state are kept.

11 Services

Service	Price
Remote installation – Engine + one Component, test signal on demo, up to 1 hour	80 USD
Additional live account change (3rd and later in a license year)	80 USD
Demo account changes, 2 live changes per year, device change via Support	Free

12 Refunds

30-day money-back guarantee. A refund deactivates the license; the Component then stops accepting new signals.

13 Prices

- All prices are in **USD**.
- Component prices are set after the beta. The first 20–50 customers receive an openly published founding price.

14 Summary

Item	Framework V1.2
Engine	Free
Components	Paid, one per instrument; bundles cover several
License	Lifetime, all V1.x releases
Subscription / rental	None
Editions	Standard 1 · Professional 3 · Business 10 accounts
